

Given a time in **12-hour AM/PM format**, convert it to military (24-hour) time.

Note: Midnight is 12:00:00AM on a 12-hour clock, and 00:00:00 on a 24-hour clock. Noon is 12:00:00PM on a 12-hour clock, and 12:00:00 on a 24-hour clock.

Function Description

Complete the function which is described by the below function signature.

```
string timeConversion(string s) {  
    # Return the 24-hour format time.  
}  
  
s: String which contains time.
```

Raw Input Format

A single string s containing a time in **12-hour** clock format (i.e.: **hh:mm:ssAM** or **hh:mm:ssPM**), where $01 \leq hh \leq 12$ and $00 \leq mm, ss \leq 59$.

Sample Input 0

```
07:05:45PM
```

Sample Output 0

```
19:05:45
```
