According to Wikipedia, a factory is simply an object that returns another object from some other method call, which is assumed to be "new".

In this problem, you are given an interface *Food*. There are two classes *Pizza* and *Cake* which implement the *Food* interface, and they both contain a method *getType*().

The main function in the *Main* class creates an instance of the *FoodFactory* class. The *FoodFactory* class contains a method *getFood(String)* that returns a new instance of *Pizza* or *Cake* according to its parameter.

You are given the partially completed code in the editor. Please complete the FoodFactory class.

## Sample Input 1

cake

## **Sample Output 1**

The factory returned class Cake Someone ordered a Dessert!

## Sample Input 2

pizza

## **Sample Output 2**

The factory returned class Pizza Someone ordered Fast Food!
